### DETAILED ACTION

1. Claims 2-3, 10-11, 18-19 are presented for consideration.

#### ***Claim Rejections - 35 USC § 103***

2. Claims 2-3, 10-11, 18-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Inui et al. (US 5,204,821)** and **Andrade, JR. et al. (US 2003/0109950 A1)** and further in view of **Akihiro, Oyama (JP 11312197 A)**.

Regarding claims 2, 10 and 18, **Inui** discloses a parts procurement system comprising:

- virtual production line preparation means for preparing a virtual production line in which objects manufactured thereon are virtually placed in sequence based on long-term production plan data covering variable production of the objects and fixed production plan data covering fixed production of the objects (Col. 1, lines 17-28; Col. 2, lines 57-62; Col. 4, lines 13-29); and parts ordering means for determining parts and the number of the parts necessary for manufacturing the objects on the virtual production line prepared by the virtual production line preparation means (Col. 1, lines 48-52; Fig. 6(1)), as well as calculating the parts ordering timing based on a production timing of the objects and parts delivery lead time (Col. 4, lines 41-47; Col. 5, lines 48-52; Col. 7, lines 27-28).

**Inui** discloses most of the limitations of claims 2, 10 and 18. However, **Inui** does not disclose long term production plan data that is more than one month. But **Andrade** discloses a method and system for planning operation in manufacturing plants wherein

Art Unit: 2125

long term production plan data is more than one month (Page 1, [0002], lines 1-3; [0007], lines 12-15). Therefore, it would have been obvious to a person of the ordinary skill in the art at the time the invention was made to combine the parts supply system of **Inui** with the system for planning operations in a manufacturing plant of **Andrade** because it would provide a planning system to optimally allocate equipment capacity to expected orders in a multiple production line manufacturing plant.

**Inui** and **Andrade** disclose most of the limitations of claims 2, 10 and 18 above but fail to disclose some limitations of claims 2, 10 and 18 above and the limitations of claims 3, 11, and 19. However, **Akihiro** discloses such limitations as follows:

As for claims 2, 10 and 18,

- correction means for correcting the virtual production line prepared by the virtual production line preparation means according to actual production results of the objects, wherein the parts ordering means places a parts order after calculating the parts ordering timing based on the corrected virtual production line (Page 6-7, [0063], i.e., In arrangement processing, it **decides on the delivery need day of each subunit from this changed lead time** of each routing of the schedule expansion master 105 classified by model, and MRP expansion of the bill-of-materials master 101 is performed in each subunit unit, and it **decides on the date of order and the delivery date of each part article after scheduling modification**).

As for claims 3, 11 and 19,

- the correction means changes the virtual production line by correcting **at least one parameter out of** a production sequence change, a design change of the object, a production progress, and a parts procurement *lead time* (Page 6-7, [0063], i.e., In arrangement processing, it **decides on the delivery need day of each subunit from this changed lead time** of each routing of the schedule expansion master 105 classified by model).

Therefore, it would have been obvious to a person of the ordinary skill in the art at the time the invention was made to combine the parts supply system of **Inui** and **Andrade** with the schedule plan and preparation managing system of **Akihiro** because it would provide an improved system wherein an schedule plan can be corrected and changed easily and thereby decide the order days of the respective parts and executing a preparation processing (Abstract, Akihiro).
